

## A Toast to Clean Energy

### Marin Solar's Oakville Ranch Vineyards Graces the Cover of Wines & Vines Magazine

In February of 2007, Marin Solar completed a 137kW installation for Oakville Ranch Vineyards in Napa, CA. Uncompromising in their endeavor for beauty and excellence, they sought an aesthetic and practical solution in solar. 636 SunPower panels mounted on rooftops and the environs now drive the electricity to make the wines we all can enjoy. We are all very pleased with the final installation, and we raise our glasses in a toast to clean energy. Click [here](#) to see more pictures.
